Work Experience

Le Reve Franchise **May 2026 – Present**

Software Development Engineer

- **Developed** full-stack web applications using **Next.js, React.js, TypeScript, Node.js, Express.js, PostgreSQL, and Prisma ORM**, while designing RESTful APIs that **reduced manual lead-processing effort by 40%** and streamlined business automation workflows.
- **Strengthened** application security with **JWT authentication, form validation, and secure data handling, while optimizing Core Web Vitals (LCP, CLS)** through code-splitting, lazy loading, and responsive UI enhancements, **improving page load performance by 35% and reducing LCP by 30%.**

ITJOBXS **Jan 2026 – May 2026**

Software Development Engineer Intern *Remote*

- **Integrated Google reCAPTCHA** with backend verification using **Node.js and Express.js, reducing bot traffic by 90% and securing form submissions.**
- **Built** request validation and abuse detection pipelines to identify **anomalous behavior and prevent fraudulent requests** at scale

Blynk Virtual Technologies **April 2025 – Jan 2026**

Software Development Engineer *Remote*

- **Co-Developed the backend for a multi-module ERP** (trading, finance, banking/compliance, KYC, HRMS) using **PostgreSQL, Supabase, and 85+ serverless TypeScript Edge Functions** — designed a 377-table schema secured with 1,378 RLS policies and 1,367 PL/pgSQL functions for RBAC
- **Built automated engines** — real-time Binance P2P auto-pay/auto-pricing, Razorpay payroll integration, and an AI-powered RAG copilot (pgvector) for trade-chat suggestions

Projects

Personalized-Learning-Recommendation-System-with-AI Source Code

- **Developed a full-stack AI-powered Personalized Learning Recommendation System** using **React, Node.js, Express, MongoDB, and JWT**, supporting multi-domain learning with secure user authentication
- **Engineered a hybrid rule-based and AI-driven recommendation engine** with a scalable domain-driven architecture, generating personalized learning paths, tracking user progress, and delivering intelligent study insights across multiple educational domains

GateFlow Source Code

- **Engineered GateFlow**, a TypeScript API gateway from scratch, implementing Trie-based routing, Redis-backed sliding-window rate limiting, LRU caching, and round-robin load balancing; integrated PostgreSQL-backed service configuration and Dockerized deployment, validated with **35/35 automated tests.**
- **Load-tested GateFlow with k6**, sustaining **5,100 requests/sec (51K requests in 10s)** with **99.99% validation checks passing**; added a live metrics endpoint and structured request logging for production-style observability.

Technical Skills

Programming Languages: TypeScript, JavaScript, C++, Python, SQL
Backend Technologies & Security: RESTful APIs, REST API Design, JWT Authentication, Nodemailer (SMTP), Google reCAPTCHA
Tools & Platforms: Git, GitHub, Docker, Vercel, Postman, Figma, OpenRouter API, Ollama (Local LLM), Supabase, MongoDB, PostgreSQL, MS SQL Server, Razorpay, CI/CD
Frameworks & Libraries: Node.js, Express.js, Prisma ORM
Core CS Fundamentals: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks, Git Workflow

Algorithmic Competitions/Achievements

- Solved 50+ Data Structures & Algorithms problems across LeetCode and HackerRank
- Achieved 5-Star rating in Data Structures & Algorithms (C++) on HackerRank

Education

Kalinga University, Raipur — Bachelor of Computer Applications (BCA) **2023 - 2026**
BCA *6.9 / 10 CGPA*
